## **CLAIMS**

15

25

- 1. A conversion circuit component which mates to a base socket, comprising:
- 5 a sealed unit body;
  - a sensor conversion and transmission circuitry enclosed by said body;
  - a display enclosed by said body; and
- a plurality of electrical contacts mounted on said body, including a first plurality of contacts for interaction with an external sensor and a second plurality of contacts for interaction with an external link.
  - 2. A component according to claim 1, wherein said plurality of electrical contacts mate with a plurality of electrical pressure contacts located on said base socket.
  - 3. A component according to claim 1, wherein said body forms together with said base socket a quick connector for quick electrical connection of said body to said socket.
  - 4. A component according to claim 1, wherein said circuitry is designed to mount in an industry standard connection head.
  - 5. A component according to claim 1, wherein said circuitry is designed to interface with an industry standard sensor.
- A component according to claim 1, wherein said circuitry is designed to interface with an industry standard link.
  - 7. The component according to claim 1 wherein the base socket is comprised of:
  - a body adapted to mount inside a standard connection head of an industrial sensing probe and be attached via standard connection means of said connection head;
    - a plurality of terminals for attaching wires associated with said probe to said socket;
      - a plurality of contacts, each associated with one of said wires; and
  - a mechanical lock adapted to engage and align a circuitry component such that said contacts align with contacts of said circuitry.
- 8. A component according to claim 1, wherein said display is on a same side of said body
  30 as at least some of said contacts.

- 9. A component according to claim 1, wherein said display is on an opposite side of said body from said contacts.
- 10. The component according to claim 1 further comprising a third plurality of contacts for interaction with an external programmer.
